

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	01 October 2026
Team ID	SWTID-2026-8331
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

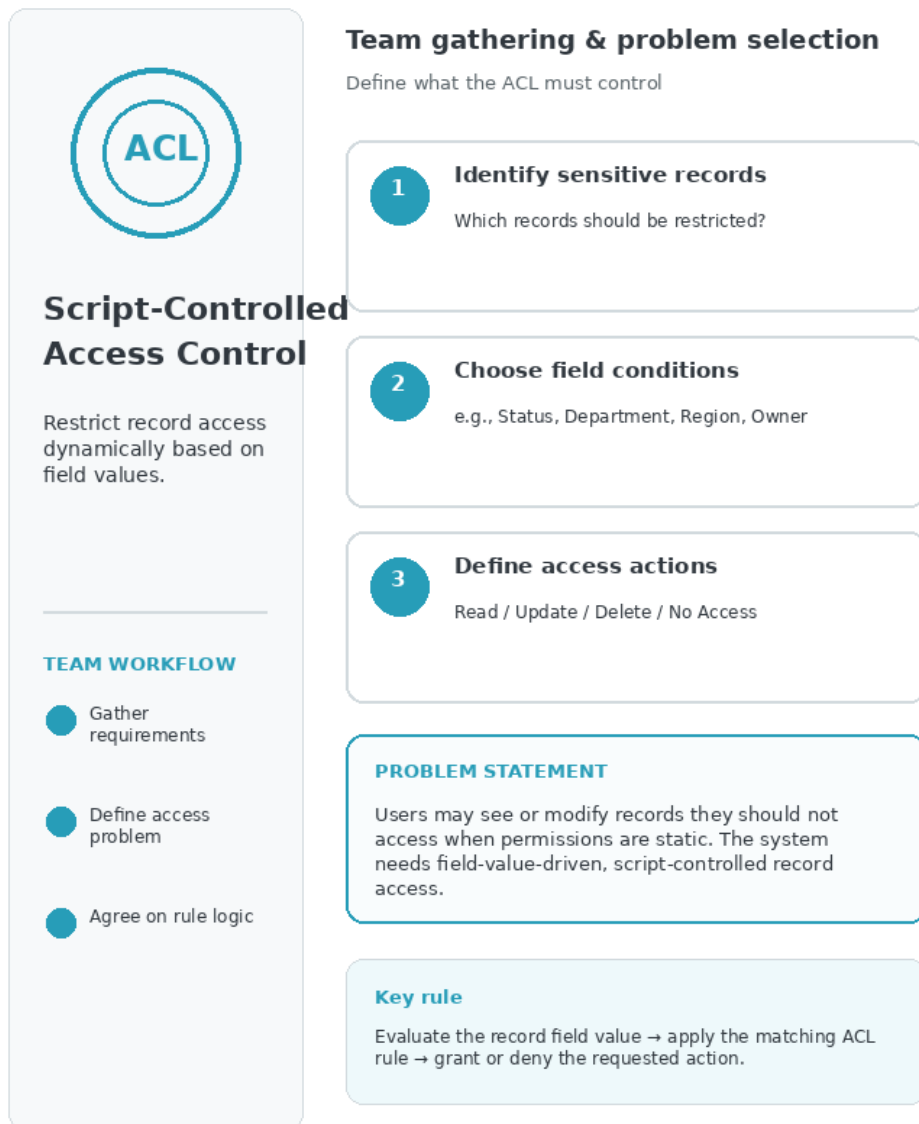

Brainstorm & Idea Prioritization Template:

For Script-Controlled ACL, brainstorming focuses on dynamic record-level access control. The team identifies field values that should influence access, defines possible rule and script approaches, and considers security, auditability, and maintainability.

The goal is to move from a static permission model to a controlled decision flow: record field value → ACL rule/script → requested action → allow or deny, with an auditable result.

Project Focus: Script-Controlled ACL – Restrict Record Access Based on Field Value

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-2: Brainstorm, Idea Listing and Grouping

Step-2: Brainstorm, Idea Listing and Grouping

Generate possible controls, rule logic and implementation ideas.

ACCESS RULES

Field-value conditions

Role + field checks

Read / update controls

Default deny

SCRIPT ENGINE

Rule evaluation

Reusable functions

Condition chaining

Validation before access

SECURITY & AUDIT

Access logs

Denied-attempt tracking

Rule versioning

Audit trail

ADMIN & UX

Rule configuration

Policy preview

Explain deny reason

Test rule before deploy

GROUPING INTO IMPLEMENTATION MODULES

Policy

Field conditions + roles

Engine

Script evaluates rule

Decision

Allow / deny action

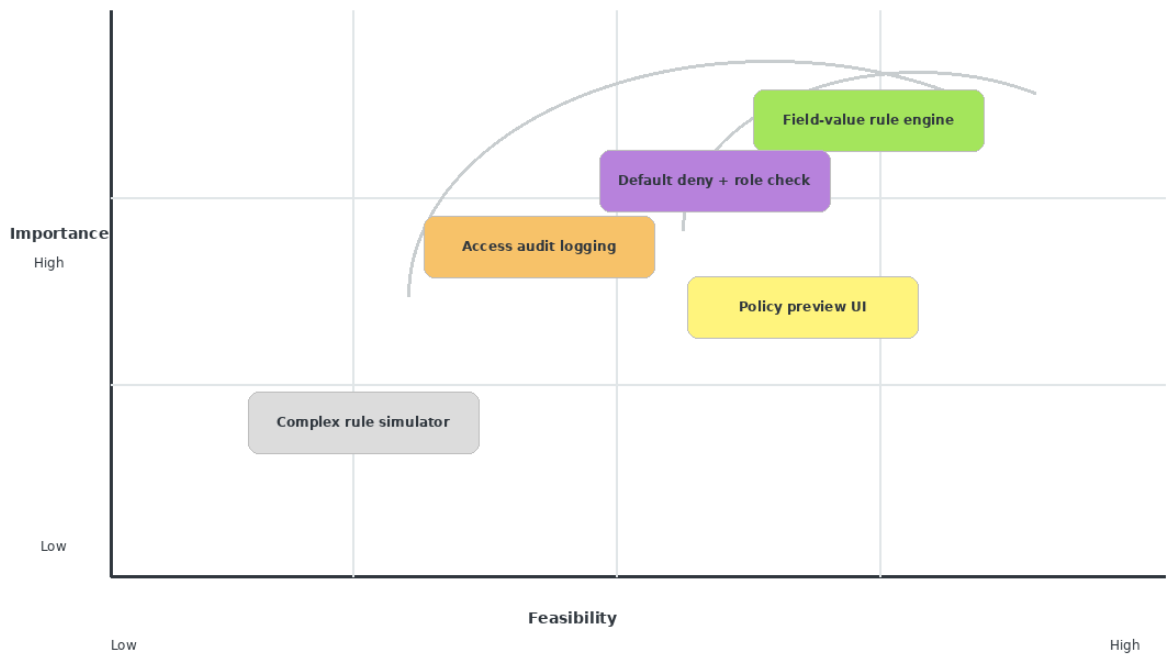

Audit

Record the access result

Step-3: Idea Prioritization

Step-3: Idea Prioritization

Prioritize ideas by implementation feasibility and security importance.

Focus first: field-value rule engine • default-deny logic • audit logging
