

Ideation Phase

Empathize & Discover

Date	01 October 2026
Team ID	SWTID-2026-8331
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

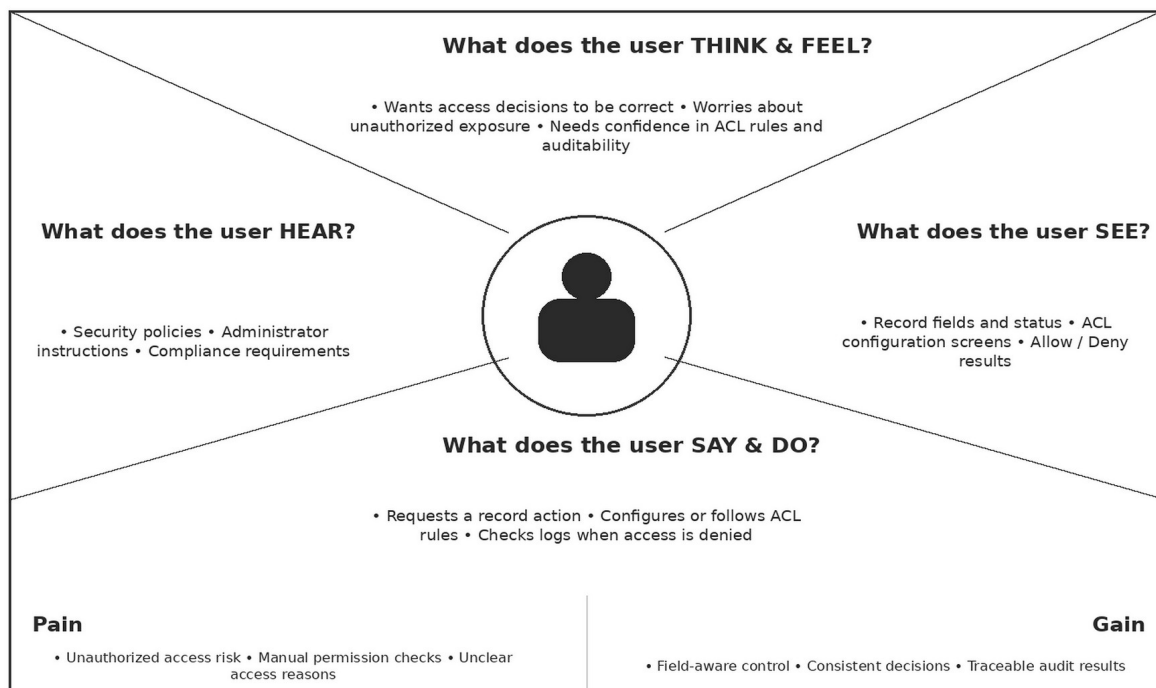

Empathy Map Canvas:

An empathy map is a simple visual that captures what users think, feel, hear, see, say and do. For Script-Controlled ACL, it helps the team understand the experience of administrators and authorized users who need field-based record access.

It is a useful tool for understanding the access-control needs, concerns and behaviours of users. Creating an effective access-control solution requires understanding the person experiencing the record-access problem. This map helps the team view the situation from the user's perspective before designing the Script-Controlled ACL solution.
