

Project Design Phase Solution Architecture

Date	01 October 2026
Team ID	SWTID-2026-8331
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

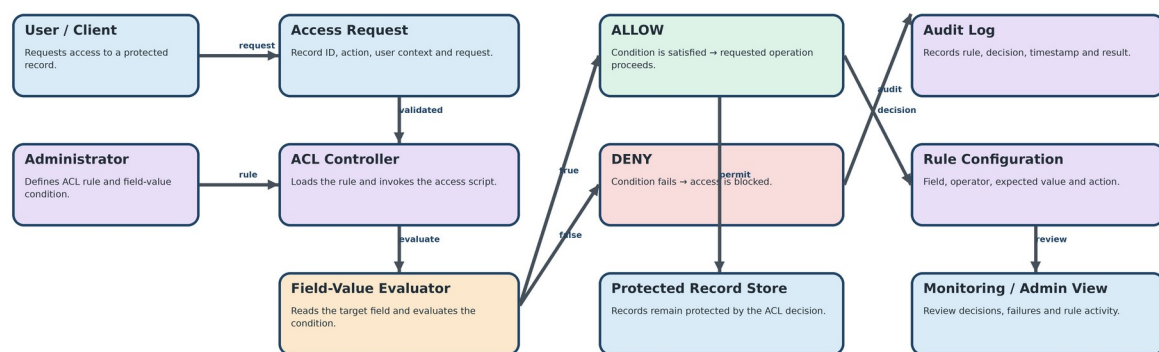

Solution Architecture:

The solution architecture defines how Script-Controlled ACL connects the user request, ACL rule, field-value evaluation, access decision, protected record and audit trail. Its goals are to:

- · Enforce record access according to a configurable field-value condition.
- · Show the structure, components, behaviour and data flow of the access-control system to stakeholders.
- · Define the ACL controller, rule configuration, field evaluator, protected record store and audit components.
- · Provide a clear architecture that can be implemented, tested, monitored and extended.

Example - Solution Architecture Diagram:

Script-Controlled ACL — Solution Architecture

Flow: Request → ACL Controller → Field-Value Evaluation → Allow/Deny → Protected Record / Audit

Figure 1: Architecture and data flow of the Script-Controlled ACL solution
