

Project Development Phase
System Performance Test

Date	01 October 2026
Team ID	SWTID-2026-8331
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	

System Performance Testing:

Project team shall fill the following information in the system performance testing template.

S.No.	Parameter	Values	Screenshot
1.	System Summary	Script-Controlled ACL checks a protected record's field value against a configured rule before access is granted. The system returns an Allow or Deny decision and keeps the record protected when the condition fails.	
2.	Functional Verification	Expected Allow: Record_Status = Approved. Expected Deny: Record_Status = Restricted. The access decision follows the configured field-value condition.	
3.	Access Decision & Audit	Each request produces an Allow or Deny result. The audit trail records the record, field check, rule ID, decision and timestamp.
